

ARIEL ZINGER

Full-Stack Developer / Product & Project Manager

Holon, Israel | arielzin33@gmail.com | [LinkedIn](#) | github.com/arielzin33-creator

SUMMARY

- **Full-Stack & AI Development Graduate**, with hands-on experience across Python, JavaScript/TypeScript, React, Node.js/Express, PostgreSQL, and agentic AI tooling (LangChain, LangGraph, MCP), plus practical experience directing AI-assisted development tools against clear specifications. I'm also experienced in product and Project management, especially in translating complex technical R&D into commercially viable products across deep-tech, medical, and consumer markets. This experience includes, Budget & Resource Allocation, operations management, Agile & Scrum methodologies, and cross-functional collaboration with the business team (Go-to-Market (GTM) Strategy, PRD & MRD authoring).

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Frontend:** React, Redux Toolkit, HTML5, CSS3, Tailwind CSS
- **Backend:** Node.js, Express.js, RESTful API design, JWT authentication
- **Databases:** PostgreSQL, Knex.js query builder, relational schema design
- **AI & Agents:** Prompt engineering, LangChain, LangGraph, Model Context Protocol (MCP), ReAct / TAO agent design patterns
- **Tools & Practices:** Git/GitHub, Agile/Scrum fundamentals, deployment basics (Render), AI-assisted development (Base44 n Claude Code) and prompt-driven spec-to-code workflows

PROJECTS

biz2code — AI-Gated Business Validation & Document Generation Platform — *Final Project, Developers Institute, 2026 — Solo build, AI-assisted development*

Architected and built solo a "Linear Gatekeeper" app that walks users through a fixed four-phase intake, then fully automates generation of a versioned three-document Business Suite (Business Plan, MRD, PRD) — addressing "AI blind spots," my term for LLMs' inability to determine unprompted which frameworks a given business idea requires.

- Built the full stack: Node.js/Express/TypeScript, React, raw PostgreSQL, JWT auth.
- Designed the intake-to-document pipeline: rigid validation gating, a deterministic calculation layer isolating derived figures from the LLM, and constrained-template generation (Groq, Gemini fallback).
- Implemented document assembly with immutable version tracking across database and disk, backed by an internal test suite (Vitest, Playwright), architecture decisions documented as ADR, and a seed project for latency-independent live demos.

CirqHub — AI-Driven Circular Economy Platform for Physical Markets — *Hackathon project, 2026 — AI-assisted build*

Co-designed the system architecture and led QA and code review for an AI-driven surplus-management platform for physical market vendors, built with Base44 as an AI-assisted development platform.

- Co-designed the system architecture: the item lifecycle and REST API surface, food-safety check constraints, and the platform's two AI decision engines — a real-time engine ranking surplus disposition (Donate / Barter / Reuse) and feeding recipe generation, and a predictive engine forecasting capacity to drive staffing and layout planning.
- Directed AI-assisted implementation of the PostgreSQL schema, Express API, and an offline-first React front end (custom offline-queue hook with local caching and background re-sync), working iteratively rather than accepting first-pass output.
- Performed manual QA across the vendor and operator surfaces — verifying disposition-state transitions, safety-constraint enforcement, and offline/online sync behavior — and code-reviewed the generated implementation for correctness and adherence to spec before sign-off.

EDUCATION

Full-Stack & AI Development Bootcamp — Developers Institute (2026, Graduate)

Intensive, project-based program (see Technical Skills for the stack covered)

Product Management course specializing in High tech sector (SaaS, hardware, etc...) | Technion | 2025

M.Sc. Chemistry (Materials & Interfaces), Weizmann Institute of Science, 2015

B.Sc. Chemistry (Extended Track), Tel Aviv University, 2012 — Top 10%

PROFESSIONAL BACKGROUND (PRIOR TO CAREER TRANSITION)

Prior to retraining as a developer, I spent over a decade in R&D leadership roles across materials science, medical devices, and consumer-product companies, managing multidisciplinary teams of 10+, running projects from concept through pilot-scale production, and coordinating cross-functionally with business, marketing, and regulatory teams.
